

Bb Trumpets

MV1

The Van Cleave MV1 Professional Bb Trumpet has been designed with real playing in mind, breaking new ground in trumpet design for today's most demanding playing situations. Our standard 4 ¾" bell produces a very even scale with great slotting and projection.

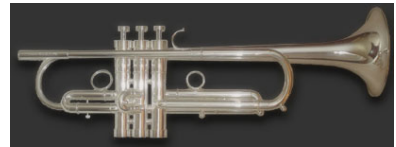

MV1L

The Van Cleave MV1L Professional Bb Trumpet is the same as the MV1 with the addition of a lightweight bell. The lighter bell thickness provides the player with a bit more sensory feedback while playing along with a slightly faster response. This makes this horn easier to play in very loud situations.

MV2

The Van Cleave MV2 Professional Bb Trumpet has been designed with real playing in mind, breaking new ground in trumpet design for today's most demanding playing situations. The larger 5" bell produces a very even scale with great slotting and projection. The large 5" bell is also a bit louder than the standard MV1 4 ¾" bell which really produces in commercial or lead situations.

MV2L

The Van Cleave MV2L Professional Bb Trumpet is the same as the MV2 with the addition of a lightweight bell. The lighter bell thickness provides the player with a bit more sensory feedback while playing along with a slightly faster response. This makes this horn easier to play in very loud situations with the added sizzle of the lighter bell. The large 5" bell is also a bit louder than the standard MV1 4 ¾" bell which really produces in commercial or lead situations.

MV3

The Van Cleave MV3 model Professional Bb Trumpet is designed to produce a bit warmer tone made popular by many vintage trumpets of the past. This 5" lightweight bell produces a sonic esthetic that is very pleasing for solo or jazz work while maintaining the response and even slotting characteristics of the MV1 and MV2. While producing a warmer sound, this horn also holds together very well in the upper register producing a very big and bold sound.

MVRB

The MVRB (removable bell) is our newest modular design trumpet. All of our bells are available in this configuration for a very versatile instrument. MV1, MV2, MV1L, MV2L, MV3 bells are all available. Mix and match the bell you need for the sound you want. Each MVRB comes with one (1) bell of your choice with additional bells available.

C Trumpets

MVC1

The MVC1 model Professional C Trumpet combines both a rich full sound and a quick response for ease of playing in all situations. This model speaks very well in both small groups and large ensembles.

Flugelhorns

MVF1

The Van Cleave Flugelhorns have been designed with real playing in mind. These Flugelhorns draw from some of the most successful designs of the vintage Flugelhorns of the past while introducing important design improvements for efficient performance.

The Van Cleave Flugelhorn design recreates the feel and sound of the most popular Flugelhorns ever built and is breaking new ground in flugelhorn design for today's most demanding playing situations.

Each Van Cleave Flugelhorn includes both a traditional cylindrical and our new conical/tapered lead pipe.

Pocket Trumpets

MVPR

The MVPR is a FUN horn that puts out a sound that is way bigger than the horn's size. We just couldn't resist building our "Pocket Rocket". This Bb trumpet really sings! Small but Mighty.

Coming Soon

Van Cleave 3 Piece Mouthpiece System

The Van Cleave 3 Piece Mouthpieces are each made up of a combination of a rim/cup, a throat, and Backbore piece. Each combination can be custom assembled by the player to fit their specific playing needs.

We offer two basic styles. The **H. E.** (High Efficiency) mouthpiece series which is designed for solo and orchestral playing. These mouthpieces give you the sound and control of the popular "legit" mouthpieces with the ease of operation of a "commercial" mouthpiece. Stop fighting those big bulky mouthpieces. Get the sound you want without all of the effort!

The Van Cleave **H. V.** (High Velocity) mouthpiece series is designed for upper register and endurance playing. These mouthpieces have been designed to help maintain the high air velocities needed to perform for long hours in the upper register without sacrificing intonation or sound.

Trumpet Playing is an Athletic Event.....Play to Win!
